MPRP Central

PLATFORM BLUEPRINT · SCREENS, FLOWS AND ACCESS MODEL

One platform for the full Malta Permanent Residence client lifecycle

From first website enquiry to residence cards and five-year compliance: how leads, clients, Licensed Agents, notaries and banks work in one controlled system, and what each of them sees.

Document	Date	Status	Data shown
Blueprint v1.0	**11 November 2026**	**For management review**	**Illustrative only**

OVERVIEW

What this document shows

A visual walkthrough of the platform before any build work starts. Every screen is drawn as it is intended to look and work.

16 Who can see what 18

17 Delivery phases 19

Five principles behind every screen

1. **One source of truth**
   All ten websites, every partner and every client work on the same client and case records.
2. **Nothing reaches a client unapproved**
   Partner and notary requests wait in an internal queue until the company approves the wording.
3. **Access by need, enforced on the server**
   Partners see only assigned cases and only the data their role needs.
4. **Rules are versioned, never hard-coded**
   Fees, thresholds and forms live in a register with review, approval and history.
5. **The platform records; the Agency decides**
   No approval predictions, no automated eligibility decisions, no invented government integration.

READING THE SCREENS

Brass numbers on the right explain the design decisions. Items marked “Verify” depend on current Licensed Agent instructions and are not yet confirmed.

Who uses the platform

Company staff
Sales, case managers, compliance, finance, marketing and directors. Full overview of every client and case.

Licensed Agents
Review files, submit applications, record official references and Agency milestones.

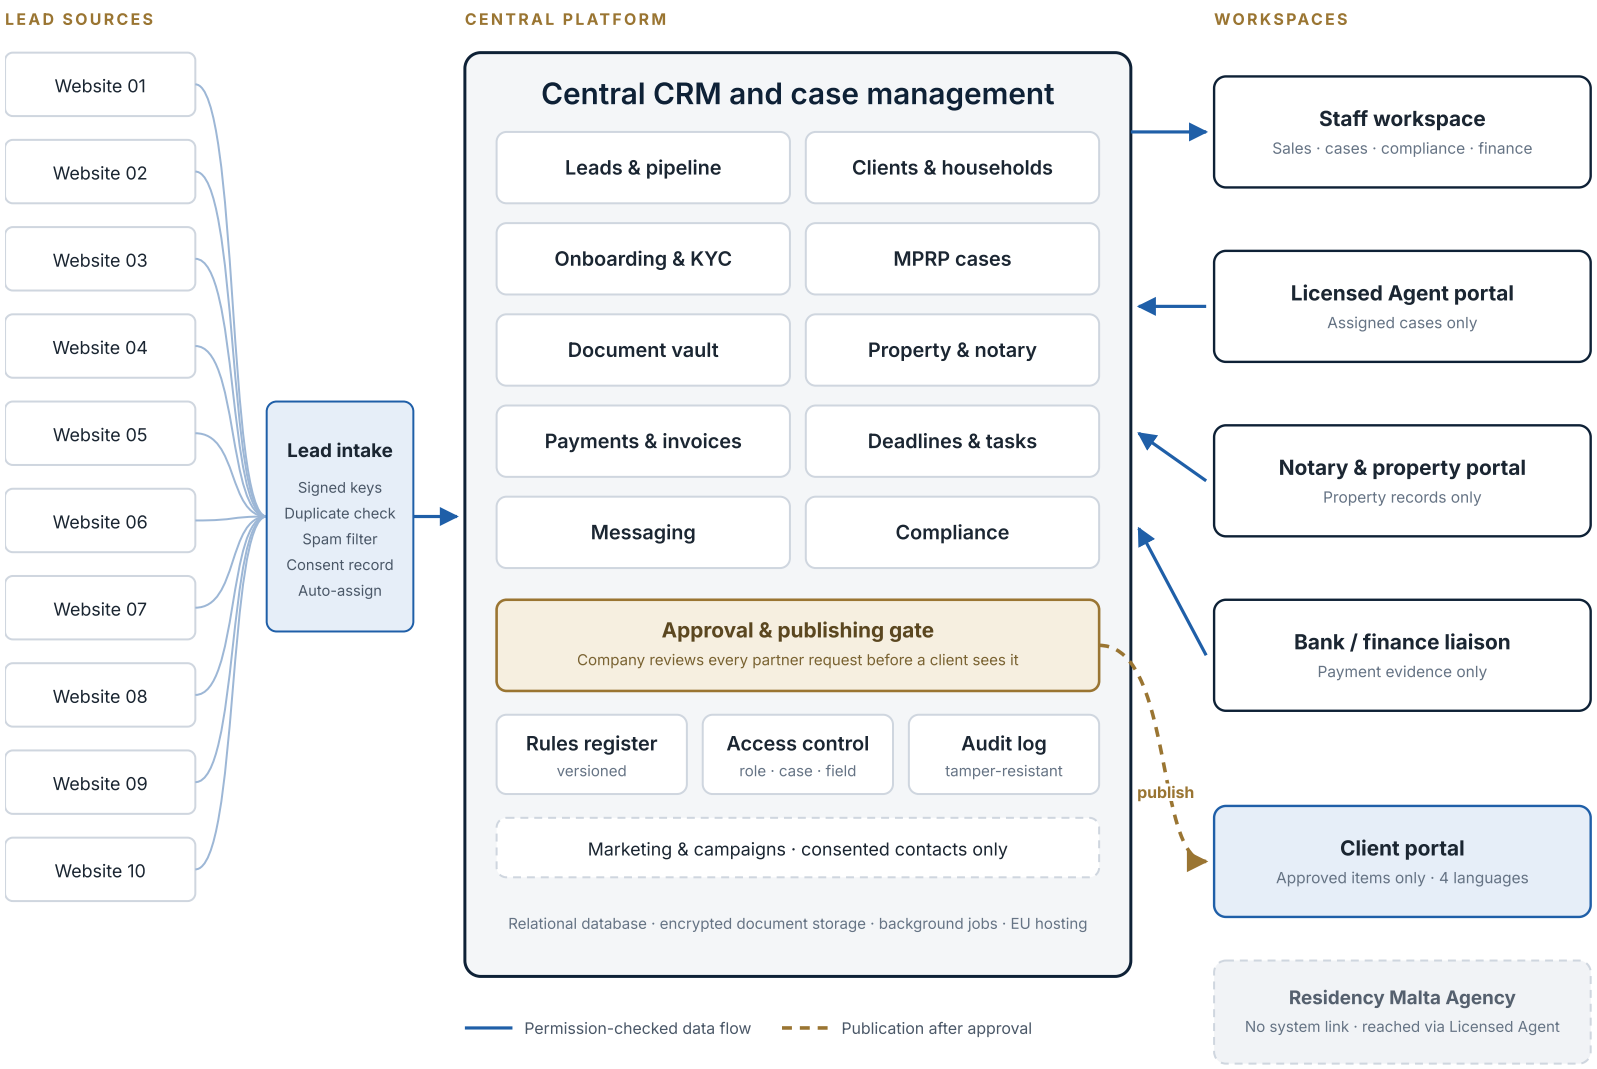

Notaries & property
Run the purchase or lease transaction and upload legal documents.

Bank liaisons
Confirm transfers and supply payment evidence.

Clients & family
Follow progress, respond to approved requests, upload documents, message the company.

Platform at a glance

Ten existing websites feed one central system. Staff, partners and clients each get their own workspace on the same records.

1. **Ten websites, one intake**
   Each site has its own ID and key, so every lead carries its true origin for life.
2. **One shared record**
   Sales, case managers, partners and clients work on the same file with different views.
3. **The gate**
   Partner and notary requests stop at the company before they reach the client.
4. **Separated marketing**
   Campaign tools see consented contact details only. Case, financial and medical data stay out.
5. **No government link**
   Submissions go through the Licensed Agent. The platform records references and milestones.

02 · OVERVIEW

Client lifecycle by party

Who does what at each phase. Phases are operational groupings; property, banking and document work can run in parallel.

	Phase 1 Enquiry	Phase 2 Qualify & sign	Phase 3 Onboard & KYC	Phase 4 Prepare file	Phase 5 Submit & vetting	Phase 6 Approval in Principle	Phase 7 Property & payments	Phase 8 Cards & compliance
Client	Submits enquiry on a website	Consultation; signs engagement	Completes profile, adds family, uploads documents	Answers approved requests	Sees approved status updates	Receives payment schedule	Signs deed or lease; pays through own bank	Biometrics; yearly confirmations
Company	Lead captured, de-duplicated, assigned	Screening, proposal, conversion to client + case	Reviews KYC; a person reviews every risk flag	Verifies the file internally	Reviews and publishes partner requests	Tasks generated from the pinned rule version	Verifies payments against bank evidence	Monitors property, insurance and card expiry
Licensed Agent				Readiness review; requests corrections	Submits; records reference and Agency queries	Records the letter with evidence	Confirms final proofs	Records certificate and cards
Notary & bank				Property shortlist; notary assigned			Title searches, deed or lease, transfer confirmations	Lease renewals; property changes
Agency (external)					*Vetting and due diligence*	*Issues Approval in Principle*		*Issues certificate and cards*

APPROVAL GATE

The brass cell is where every partner-generated request is reviewed before publication to the client.

AGENCY ROW

The Agency has no access to the platform. Its decisions are recorded by an authorised user with evidence attached.

AFTER APPROVAL

The case stays open for at least five years of monitoring and does not close automatically.

The approval gate

The single most important control in the platform: nothing a partner writes is shown to a client until the company approves it.

1 · Partner	2 · Company	3 · Company	4 · System	5 · Client	6 · Company	7 · Partner	8 · System
Creates request	**Internal review**	**Approve & reword**	**Publish**	**Responds**	**Checks response**	**Reviews**	**Completed**
Licensed Agent or notary asks for a document or answer	Lands in the approval queue; client cannot see it	Edit wording, add instructions, set deadline	Appears in the client portal; client notified	Uploads files or answers in the portal	Quality check before it goes back	Accepts, rejects or asks for a replacement	Closed with a full audit trail

WHAT THE LICENSED AGENT WROTE

"Statements for account ending 4471 stop at July. Need August to October, bank-stamped. Also need explanation for incoming €210,000 on 14 August. Internal: vetting team flagged this, treat as priority."

Stored unchanged as the audit record. Never shown to the client.

WHAT THE CLIENT RECEIVES

"Please upload bank statements for your account ending 4471 covering August to October 2026, stamped by your bank, together with a short note explaining the transfer you received on 14 August. Due by 25 November 2026."

Approved by S. Keller · published in English and Chinese.

COMPANY CAN

Approve, reject, edit wording, add instructions, set a deadline, attach documents, or send back for clarification.

NOT A LEGAL SIGN-OFF

Approving publication does not replace the Licensed Agent's professional or regulatory decisions.

APPLIES TO

Licensed Agents, notaries and bank liaisons alike.

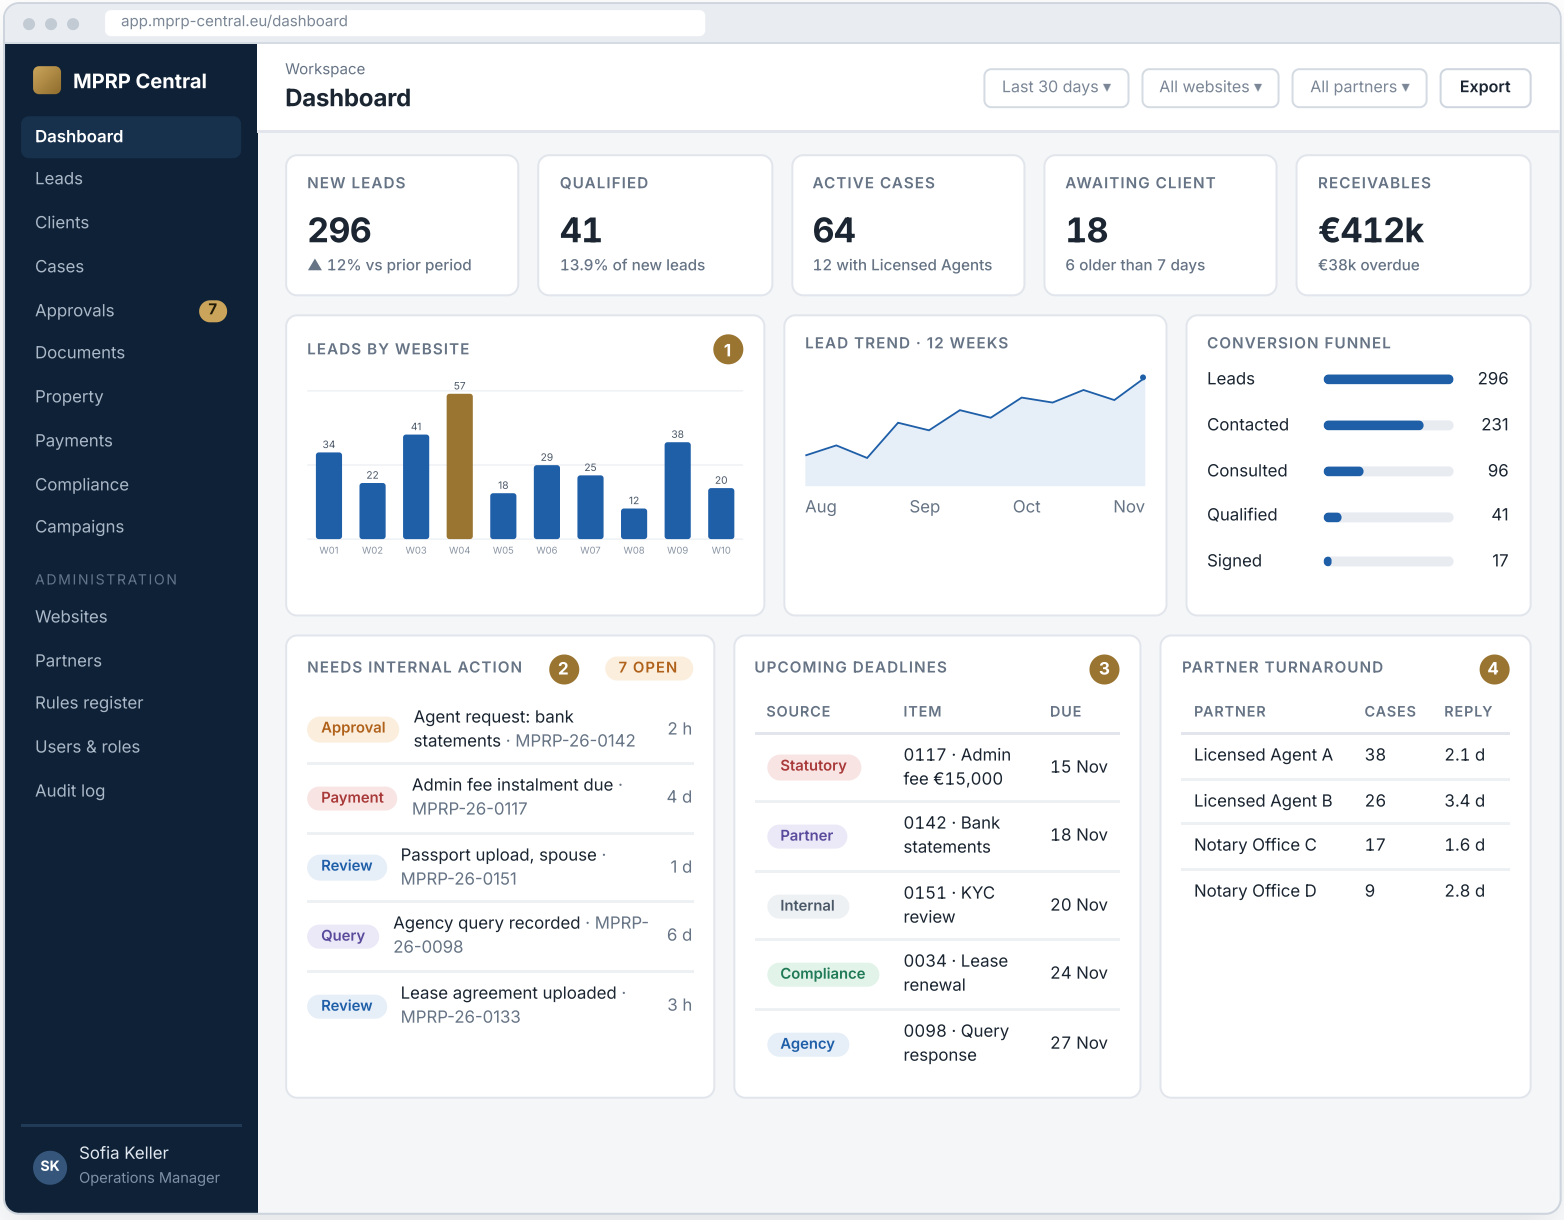

Who can see what, step by step

	1 · CREATES REQUEST	2 · INTERNAL REVIEW	3 · APPROVE & REWORD	4 · PUBLISH	5 · RESPONDS	6 · CHECKS RESPONSE	7 · REVIEWS	8 · COMPLETED
Partner's original request · Partner	●	●	●	●	●	●	●	●
Company	●	●	●	●	●	●	●	●
Client	○	○	○	○	○	○	○	○
Approved client wording · Company	○	○	●	●	●	●	●	●
Client	○	○	○	●	●	●	●	●
Client's response and files · Company	○	○	○	○	●	●	●	●
Partner	○	○	○	○	○	○	●	●

Executive dashboard

The whole business on one screen: lead flow, active cases, what is waiting on whom, and money due.

Directors · Operations

1. **Source performance**
   Each website is measured separately, down to campaign and landing page.
2. **One action list**
   Approvals, reviews, payments and Agency queries for the whole company in one queue.
3. **Deadlines show their source**
   Statutory, Agency, partner, internal target or client-chosen. Staff always know which dates are legal.
4. **Partner service levels**
   Workload and reply times per partner, for contract reviews.

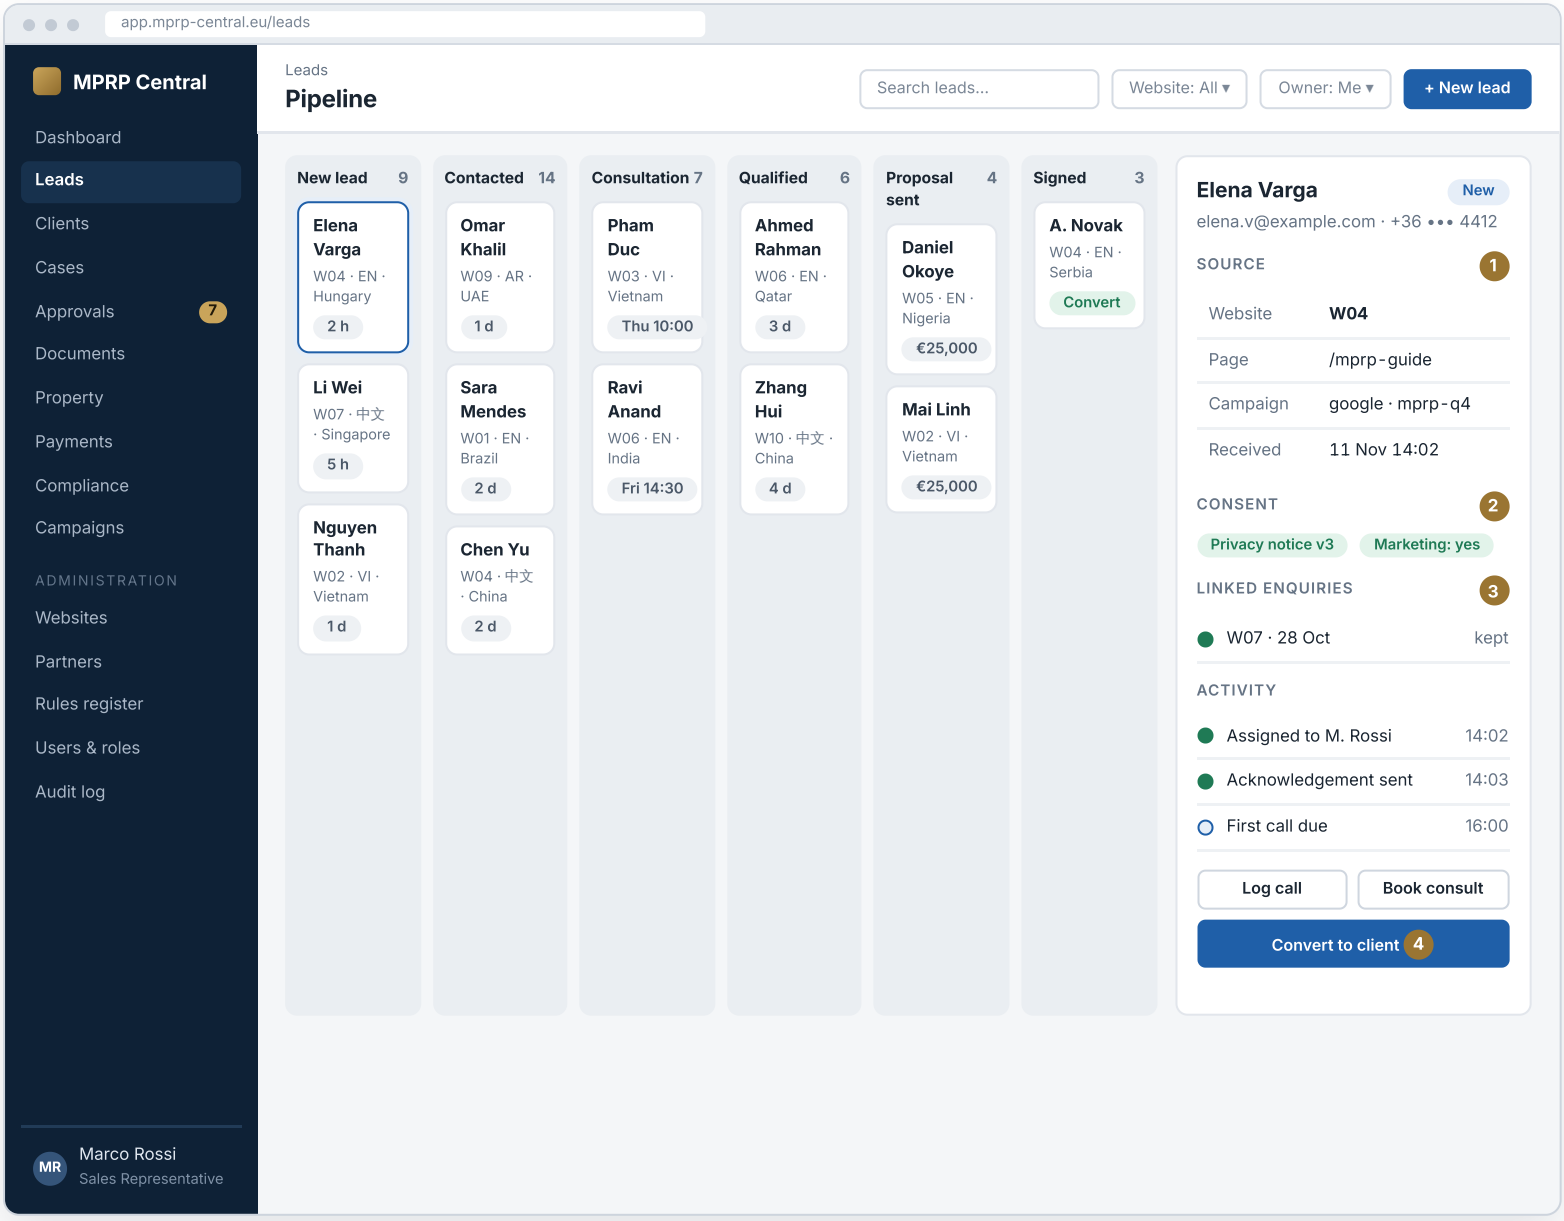

FILTERS

Every figure filters by date, owner, team, website, country and partner, and opens the list behind it.

Lead pipeline

Every enquiry from all ten websites in one board, with source and consent attached to each lead.

Sales team · Sales manager

1. **Attribution is permanent**
   Website, landing page and campaign stay on the record after the lead becomes a client, so revenue can be traced to its source.

2. **Consent evidence**
   The exact notice version and marketing permission are stored with date and time.

3. **Same person, two websites**
   Enquiries are linked to one contact. Each keeps its own source and consent.

4. **Conversion**
   One action creates the Client ID, the Case ID and the portal invitation, keeping the full lead history.

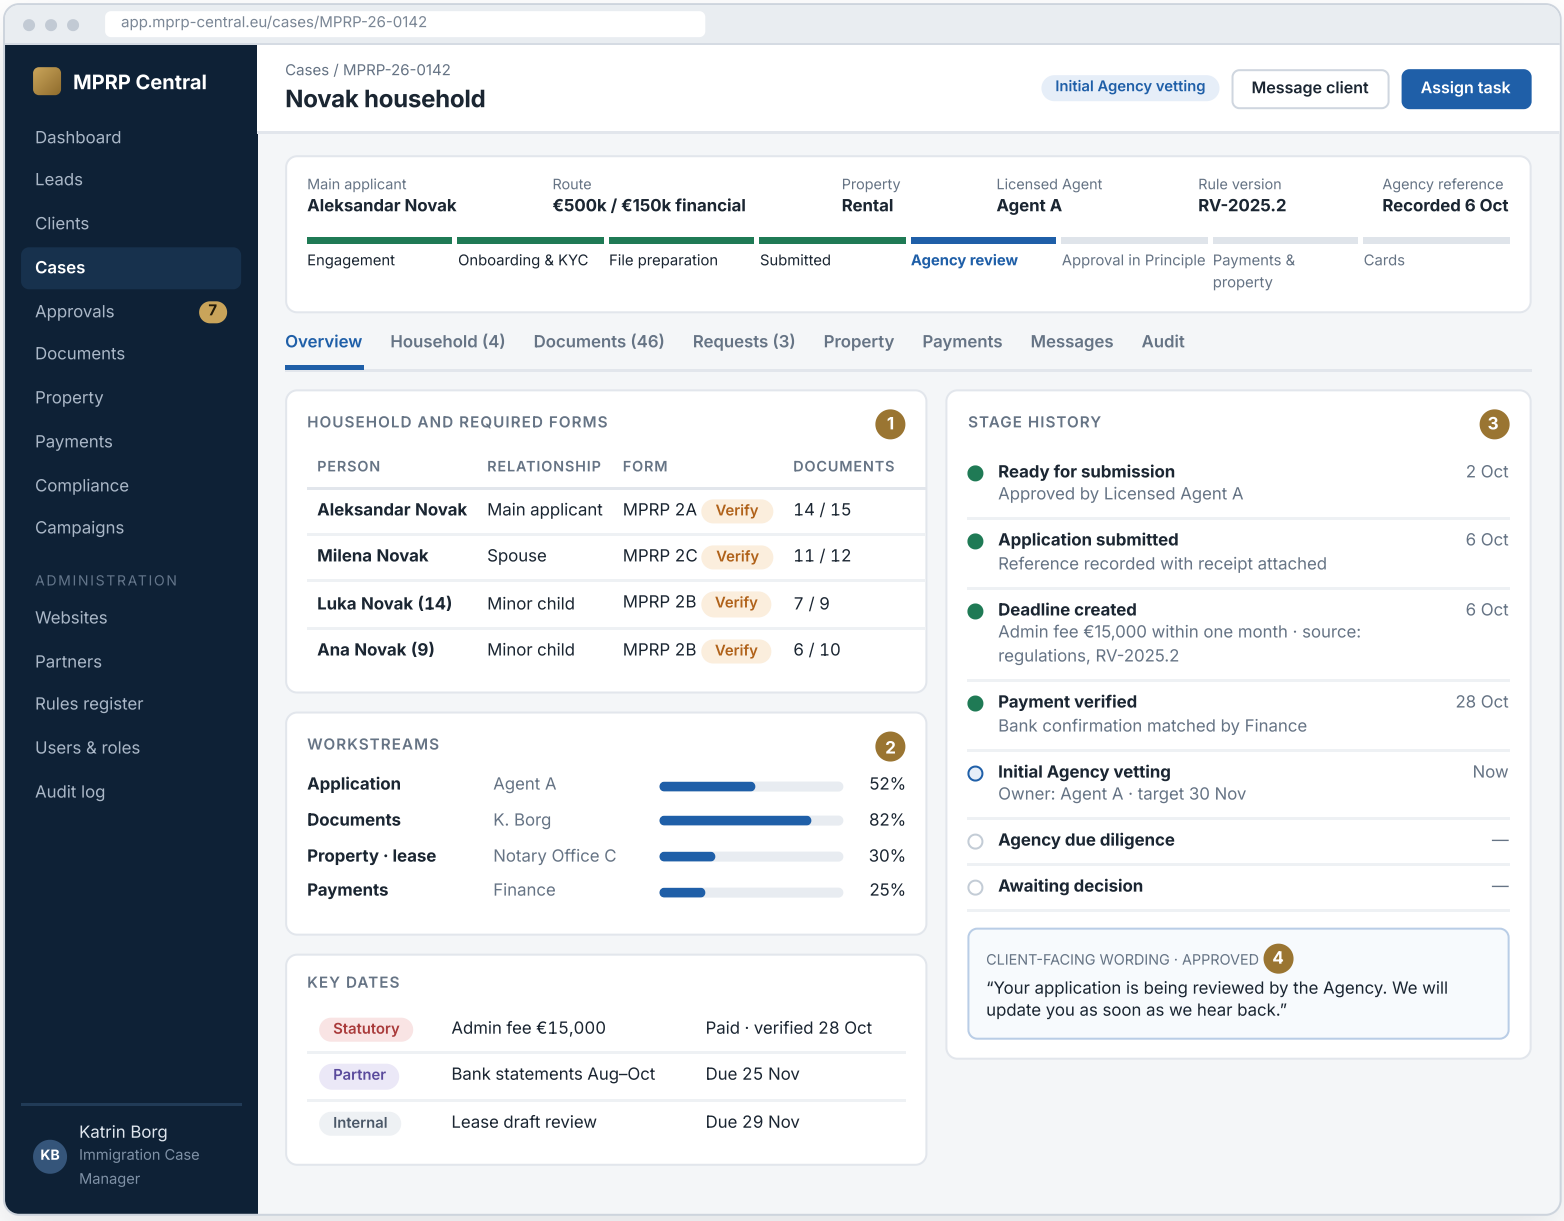

RECORDED OUTCOMES

Lost, Not eligible, Deferred and Unresponsive are saved with a reason, and every stage move is time-stamped.

Case file

One family's application in a single view: stage, people, documents, property, payments and history.

Case managers · Compliance

1. **Forms follow the family**
   Required forms and documents are generated per person from age, relationship and the active rules.
2. **Parallel workstreams**
   Application, documents, property and payments progress side by side, each with an owner.
3. **Every step has a source**
   Deadlines state where they come from and which rule version produced them.
4. **Two wordings per stage**
   An internal note and a separate approved description for the client.

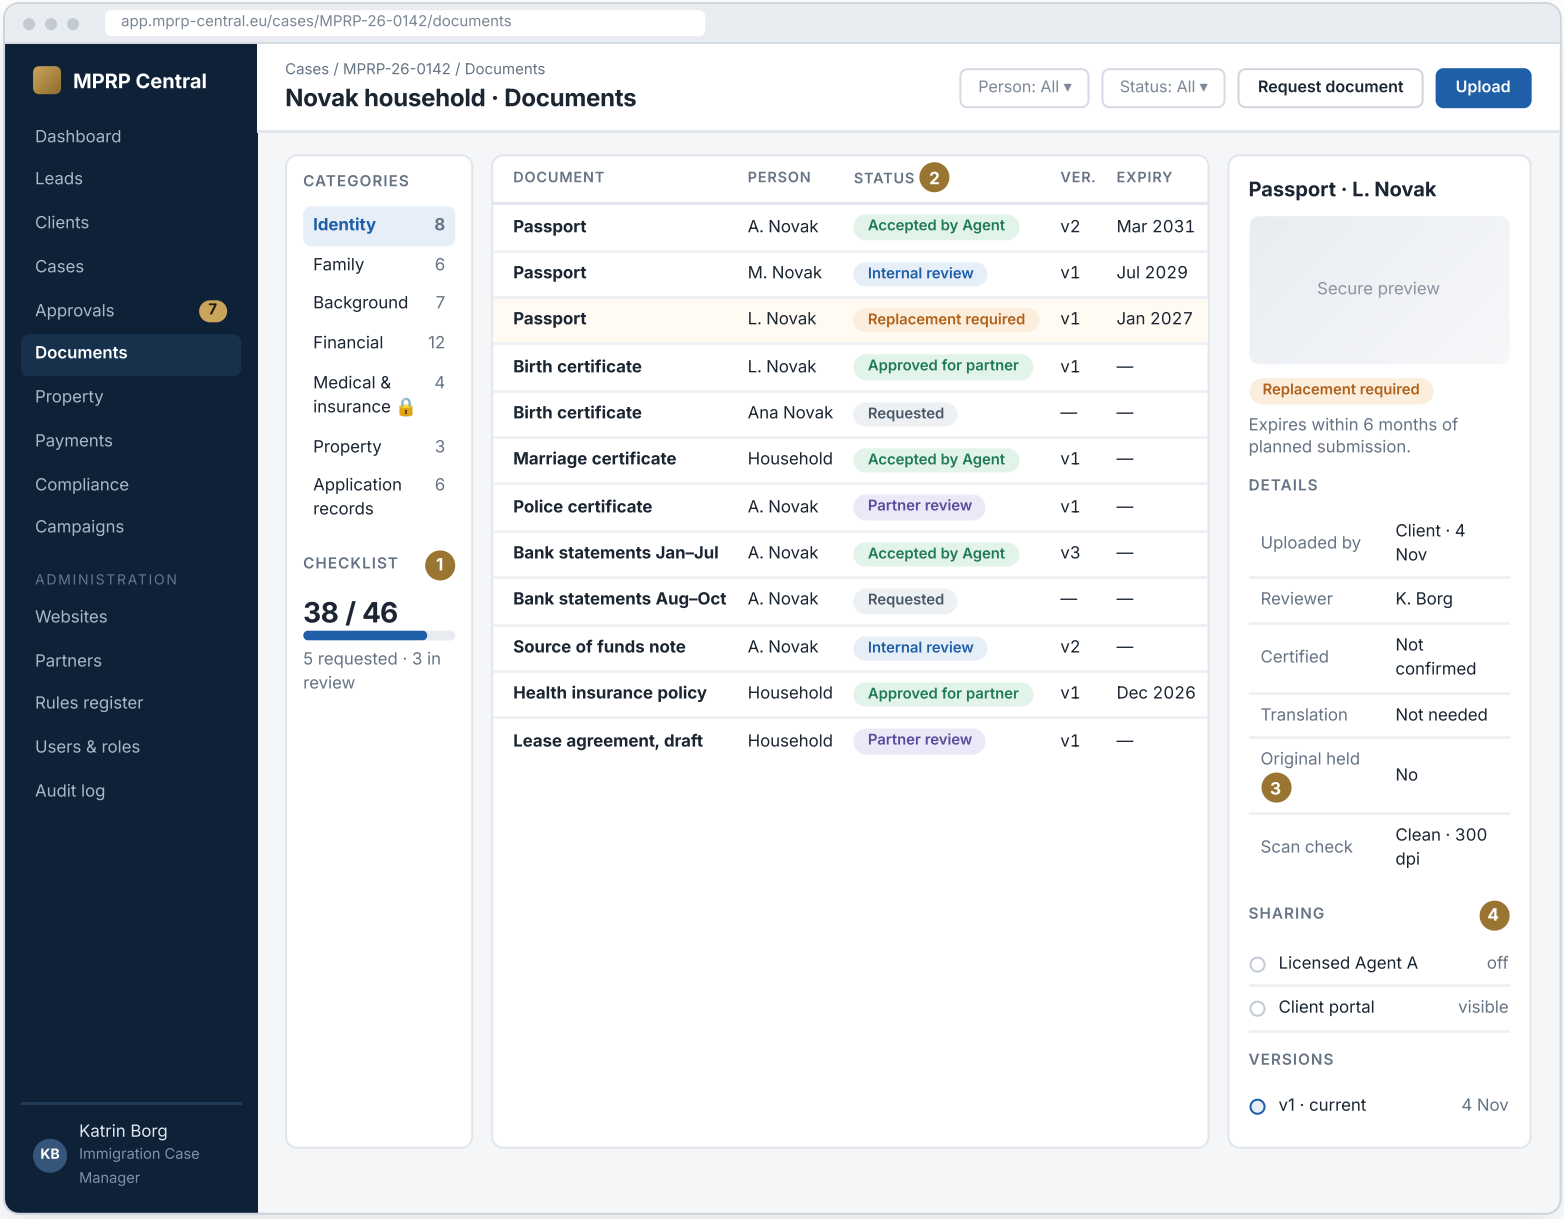

REQUIRES VERIFICATION

Form codes 2A, 2B and 2C come from the 2026 Agency circular and must be confirmed with the Licensed Agent before go-live.

Document vault

Structured, versioned storage for every file, with review status and precise sharing per partner.

Case managers · Compliance

1 Checklist per case
Built from the rules: what is required, for which person, and what is still missing.

2 Clear status path
Requested → Uploaded → Internal review → Approved for partner → Partner review → Accepted or Replacement required.

3 Physical originals
Tracked separately. An upload is never treated as certified or Agency-accepted.

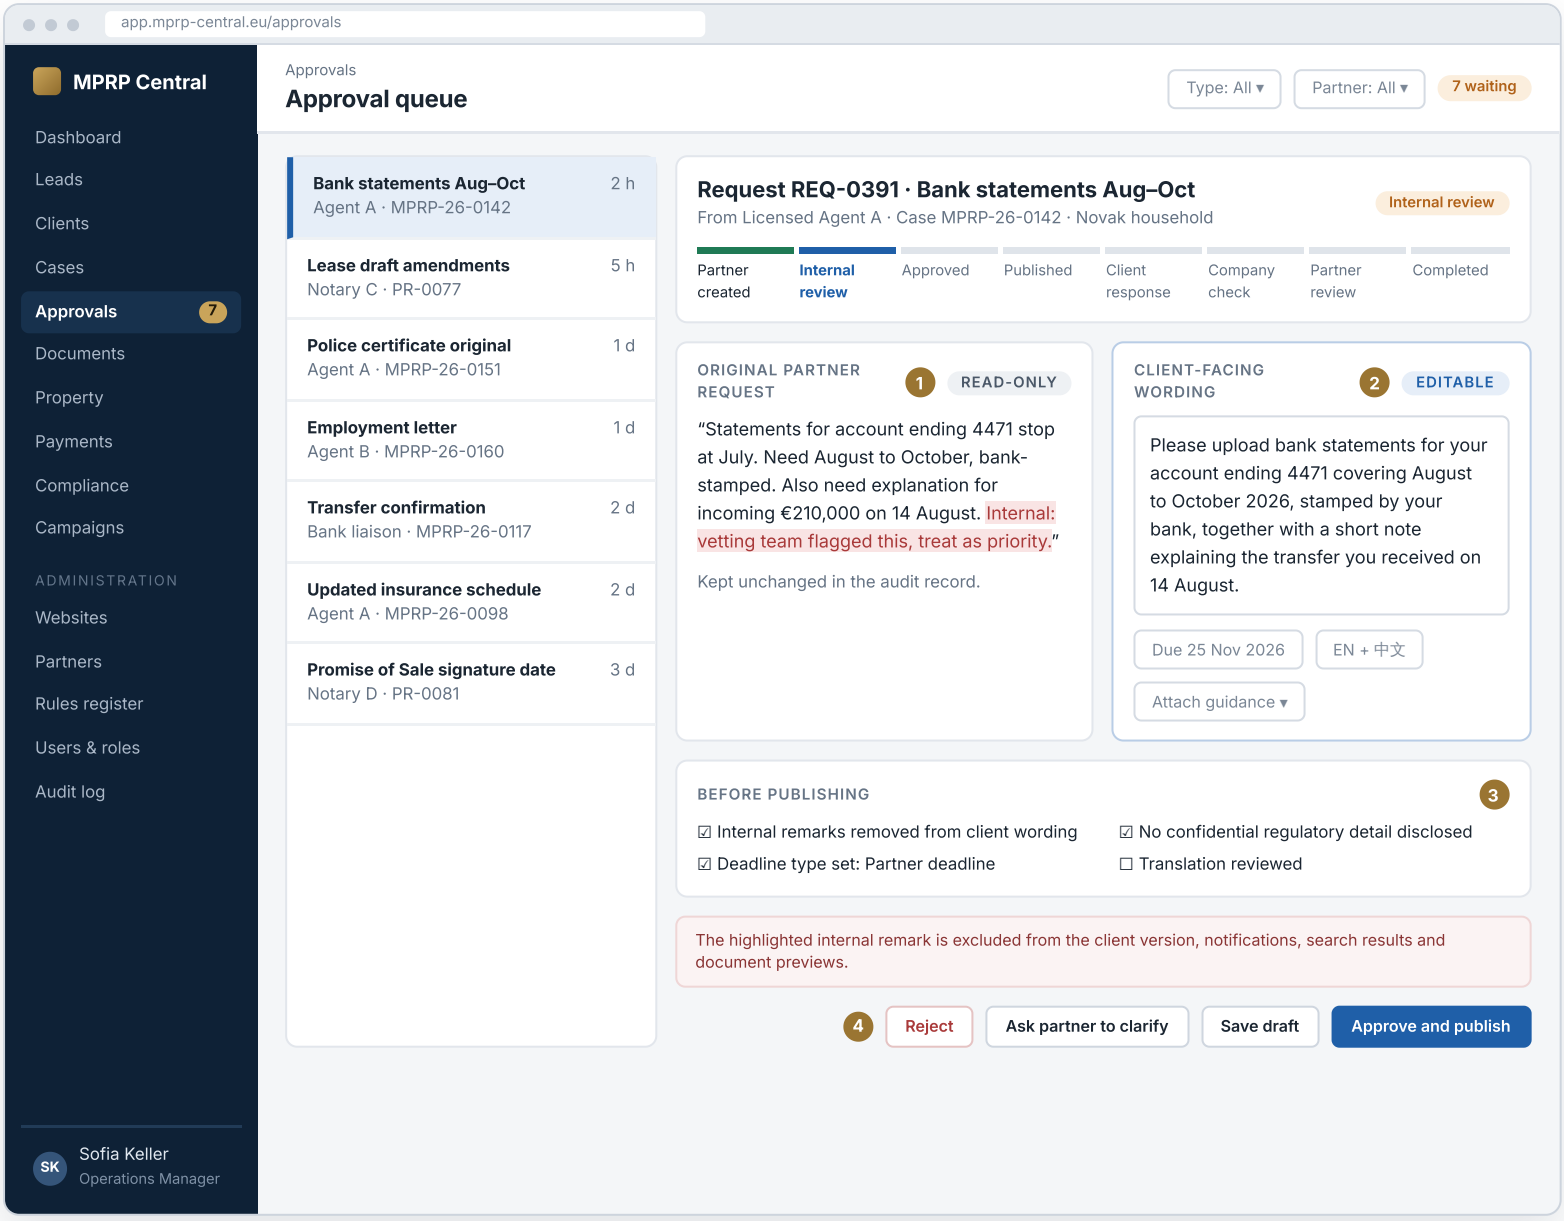

4 Sharing is per document
A partner sees a file only after it is approved for them. Medical and insurance files carry stricter access.

NOTHING IS OVERWRITTEN
Replacements create a new version. Every view and download is logged.

Approval queue

Where the company decides what clients are asked for, and in what words.

Case managers · Operations

1 Original preserved
The partner's message is stored exactly as written and is never shown to the client.

2 Company controls the wording
Staff rewrite, add instructions, set the deadline and choose languages.

3 Checks before release
A short checklist prevents internal or confidential remarks from leaking.

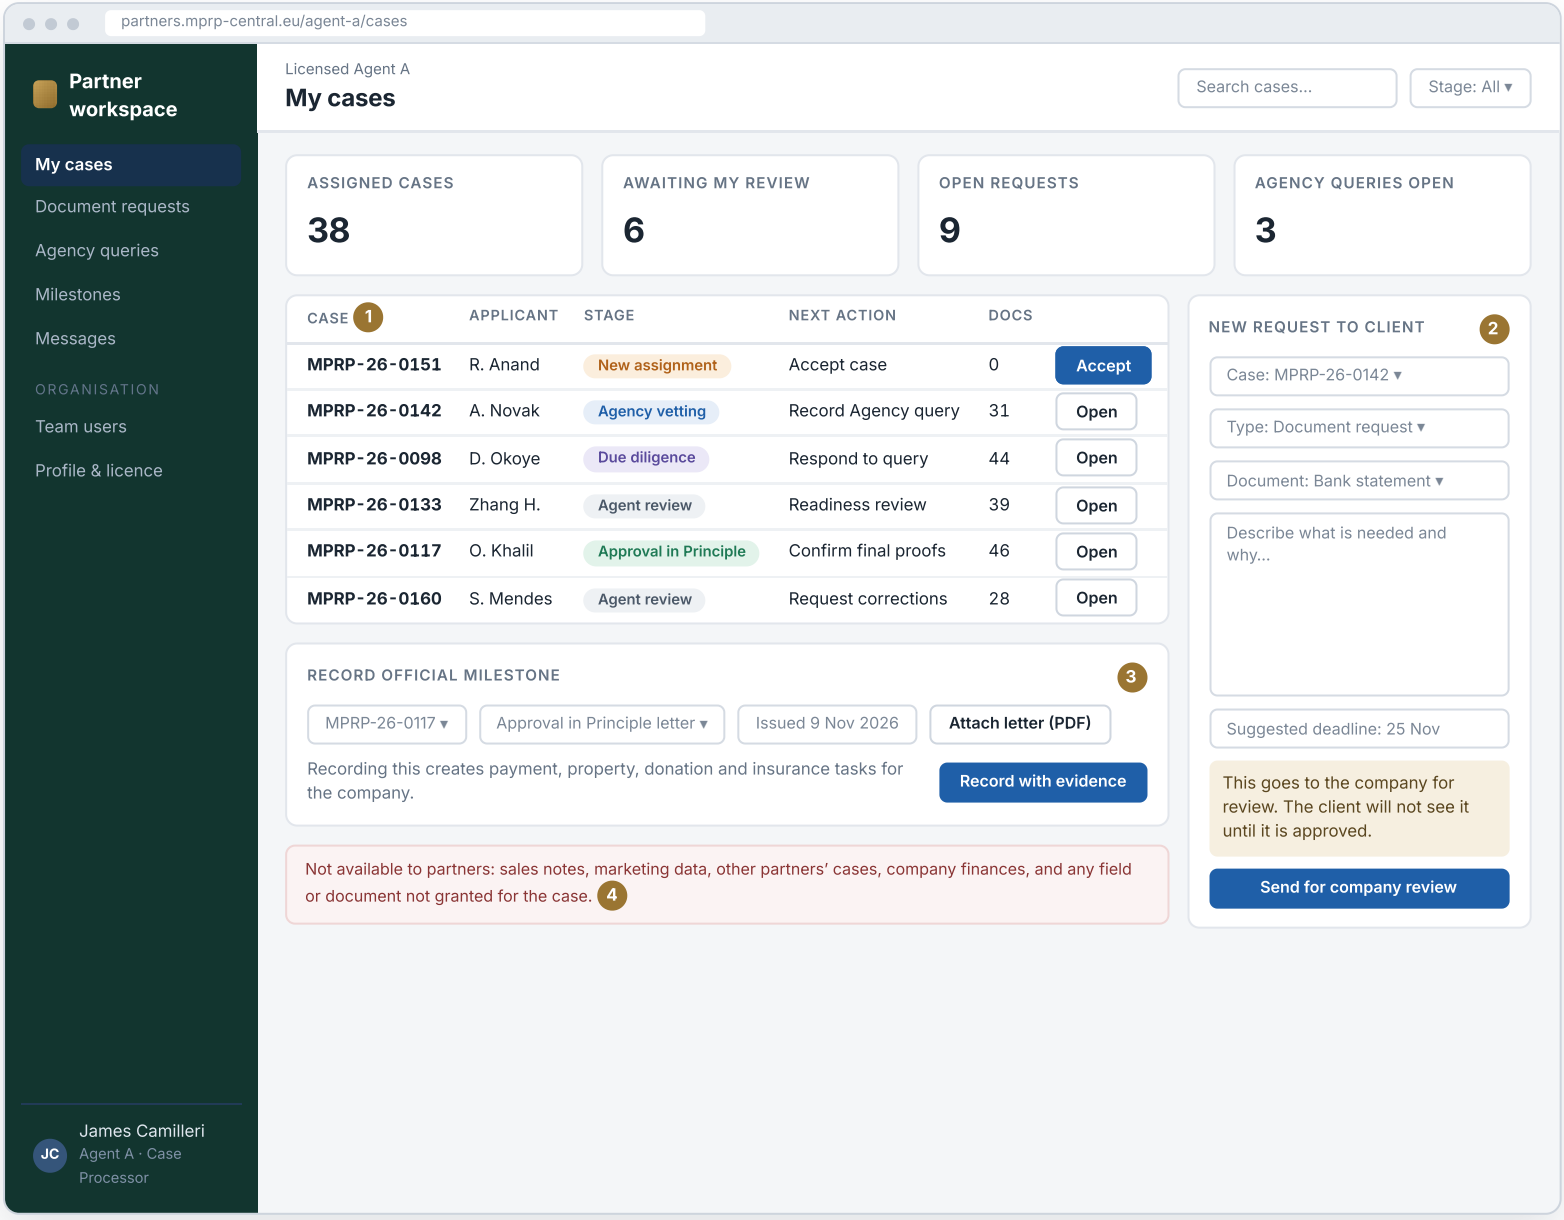

4 Four outcomes
Reject, send back, save, or approve. Only approval makes the request visible to the client.

DEFAULT IS INTERNAL ONLY
Every item starts hidden from the client. Visibility is always a deliberate decision.

Licensed Agent portal

A separate workspace for each Licensed Agent firm, limited to its assigned cases and approved documents.

Licensed Agent users

1 Assigned cases only
A partner user cannot open, search or guess their way into any other case or file.

2 Requests go to the company
The form says so plainly. Nothing is sent to the client directly.

3 Official milestones need evidence
Submission references and Agency letters are recorded by the Licensed Agent with the document attached.

4 Limited by design
Being assigned to a case does not reveal everything. Sensitive categories need a specific grant.

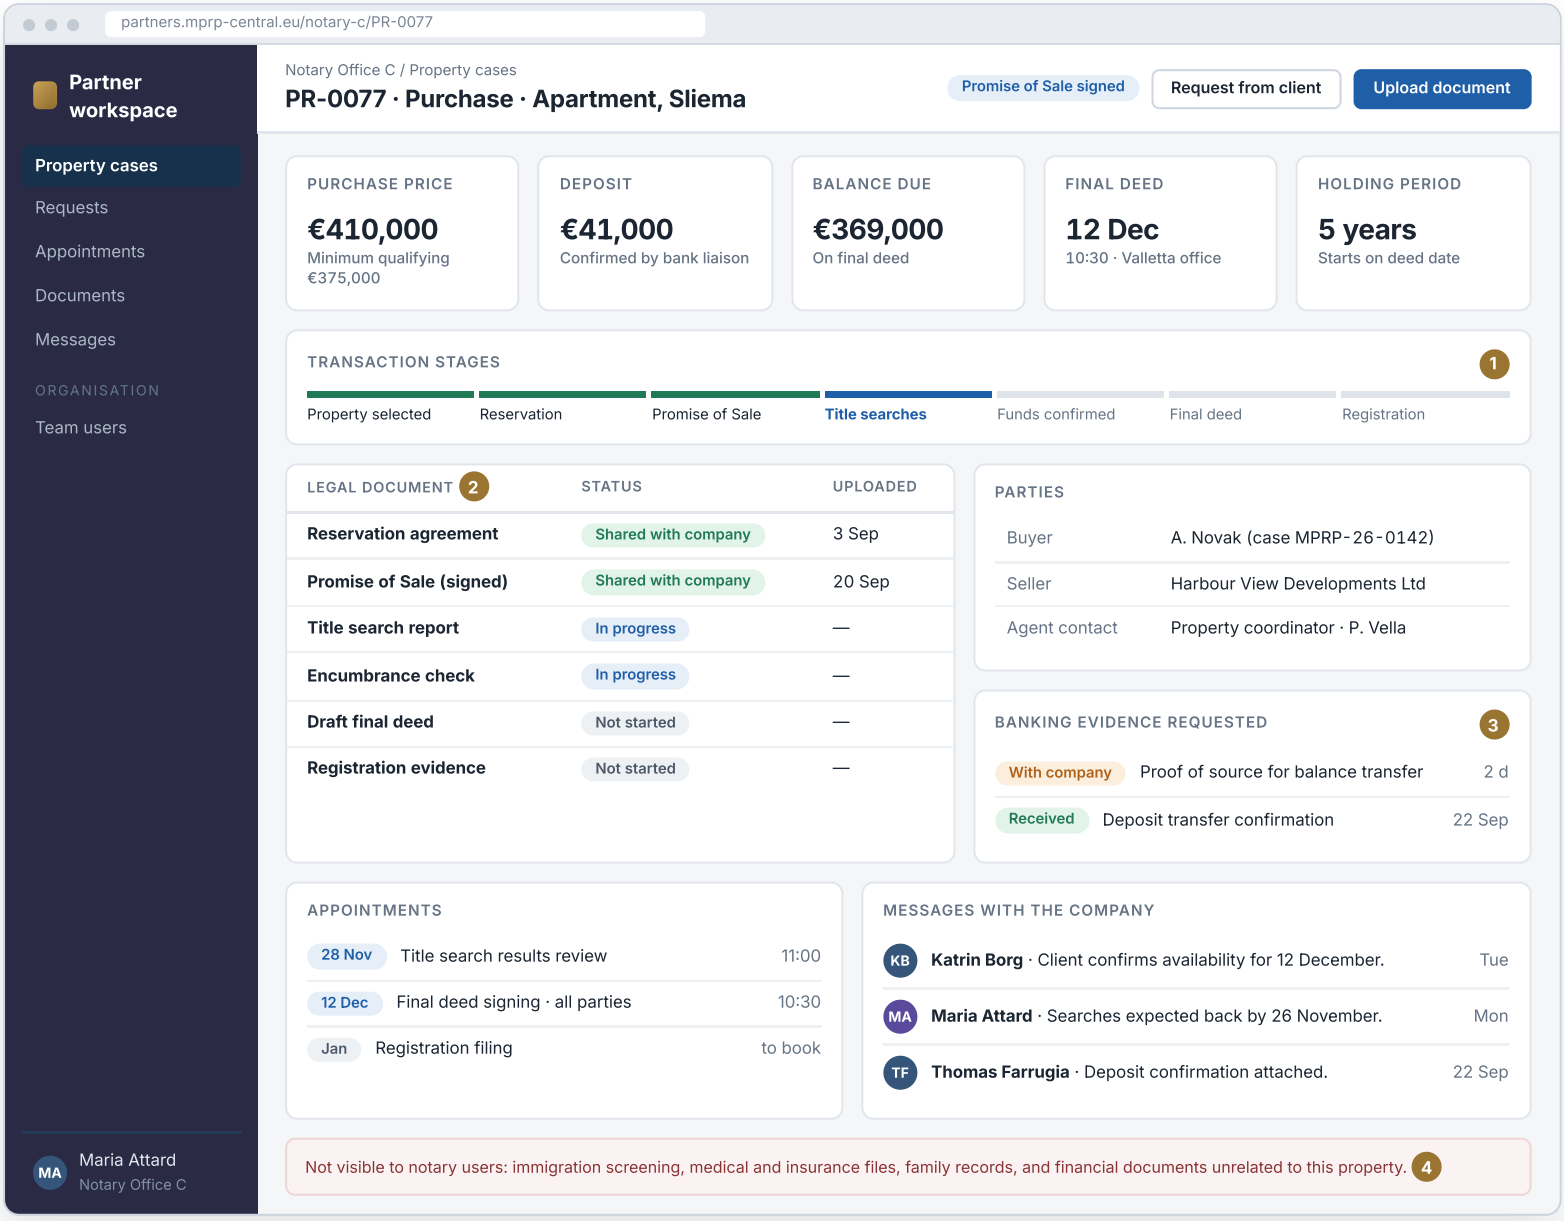

SEVERAL FIRMS, FULLY SEPARATED

Each Licensed Agent firm has its own users, contract reference and licence status.

Notary and property portal

The property transaction as its own workstream, linked to the case but showing property records only.

Notaries · Property coordinators

1. **Purchase or rental**
   The same workspace handles a lease: landlord, annual rent against the €14,000 minimum, term and renewal dates.
2. **Legal documents stay with the notary**
   The notary uploads and marks stages. The platform never drafts or approves a legal conclusion.
3. **Client requests use the gate**
   Anything the notary needs from the client is reviewed by the company first.
4. **Property view only**
   The notary sees the transaction, not the rest of the immigration file.

ONGOING OBLIGATION

The five-year qualifying holding period is tracked from the deed or lease date into compliance.

Client portal

A calm, premium view for the client: where the application stands, what is needed, and who to talk to.

RECENT UPDATES FROM YOUR TEAM

- **Administration fee received.** Your first instalment has been confirmed by our finance team. — 28 Oct
- **Application submitted.** Your Licensed Agent has filed your application with the Agency. — 6 Oct
- **Documents complete for submission.** Thank you for providing everything we asked for. — 2 Oct

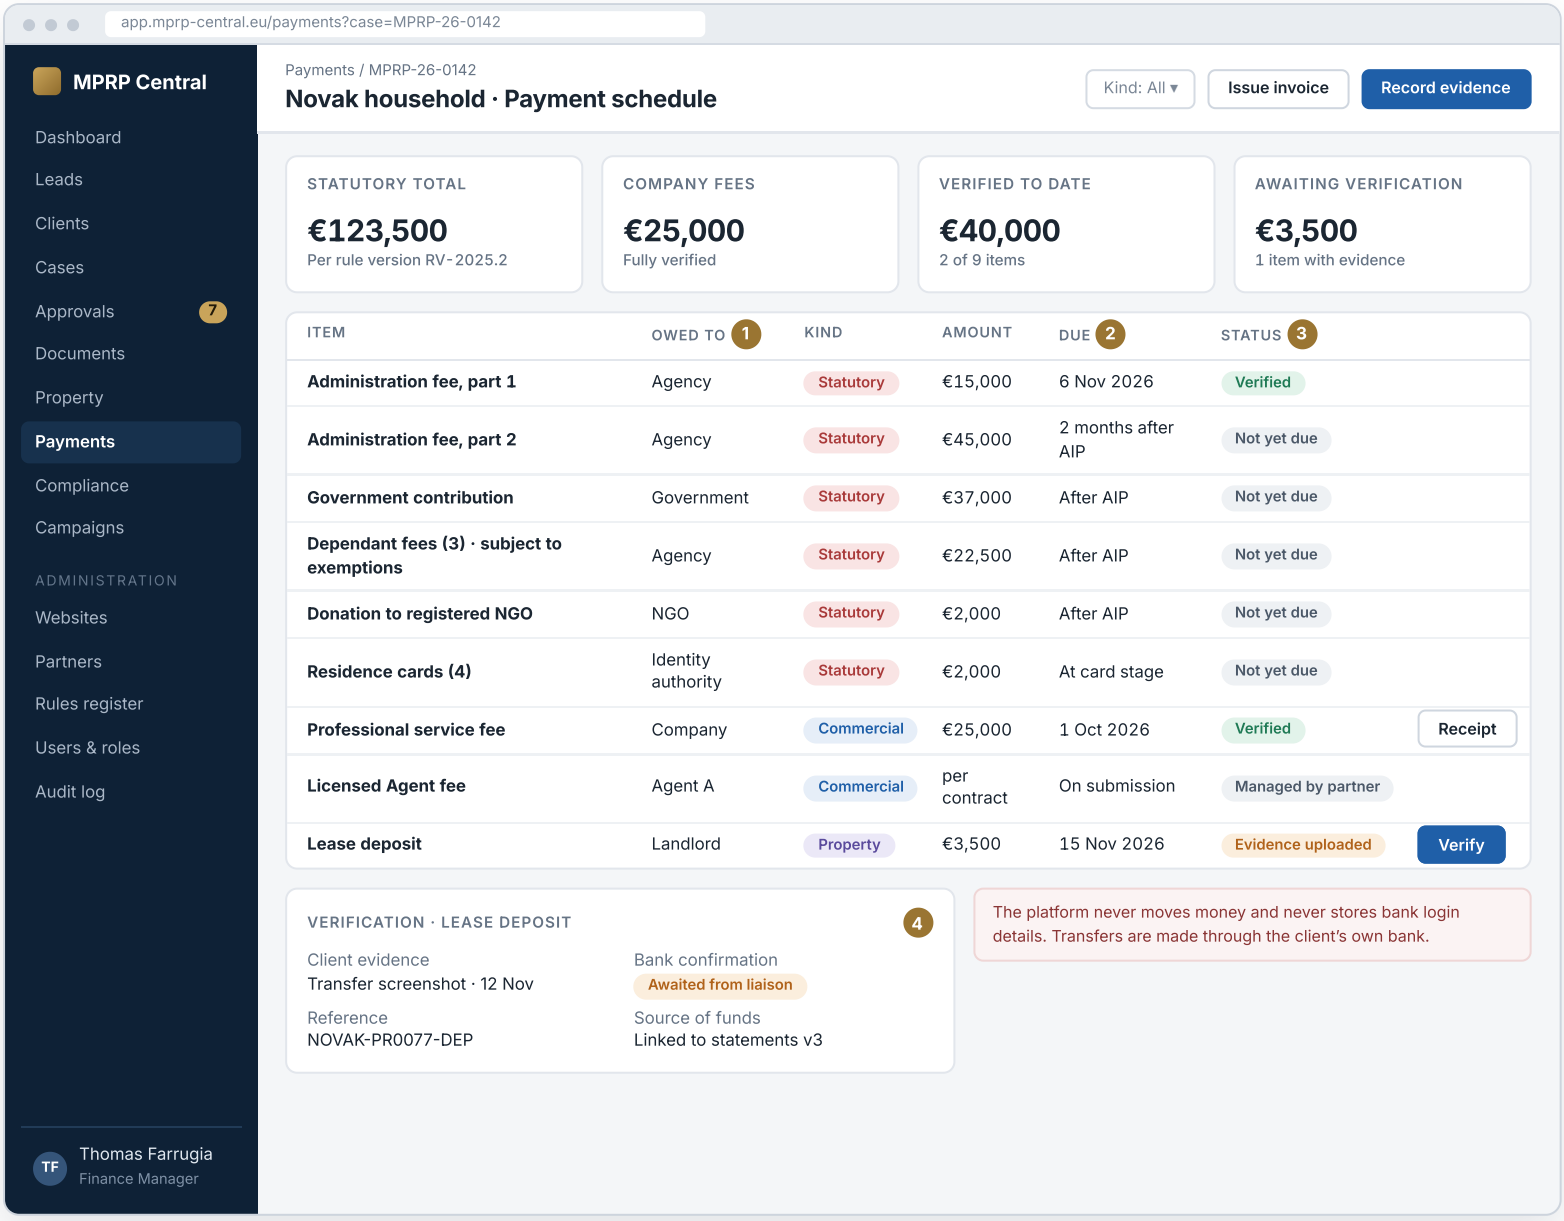

1. **Confirmed status only**
   No approval probability and no promised dates.
2. **Approved requests**
   The client sees the company's wording, never the partner's original.
3. **Honest payment status**
   "Evidence received" is not "Verified". Only Finance confirms against the bank.
4. **Four languages**
   English, Chinese, Vietnamese and Arabic, on phone and desktop.

Payments

Every amount in a case, clearly separated by who is owed and whether it has really been received.

Finance · Case managers

1 Who is owed
Agency, Government, NGO, company, partner or landlord. Statutory and commercial amounts are never mixed.

2 Dates from the rules
Due dates are calculated from recorded milestones and the pinned rule version.

3 Verified means verified
A client upload moves an item to "Evidence uploaded" only.

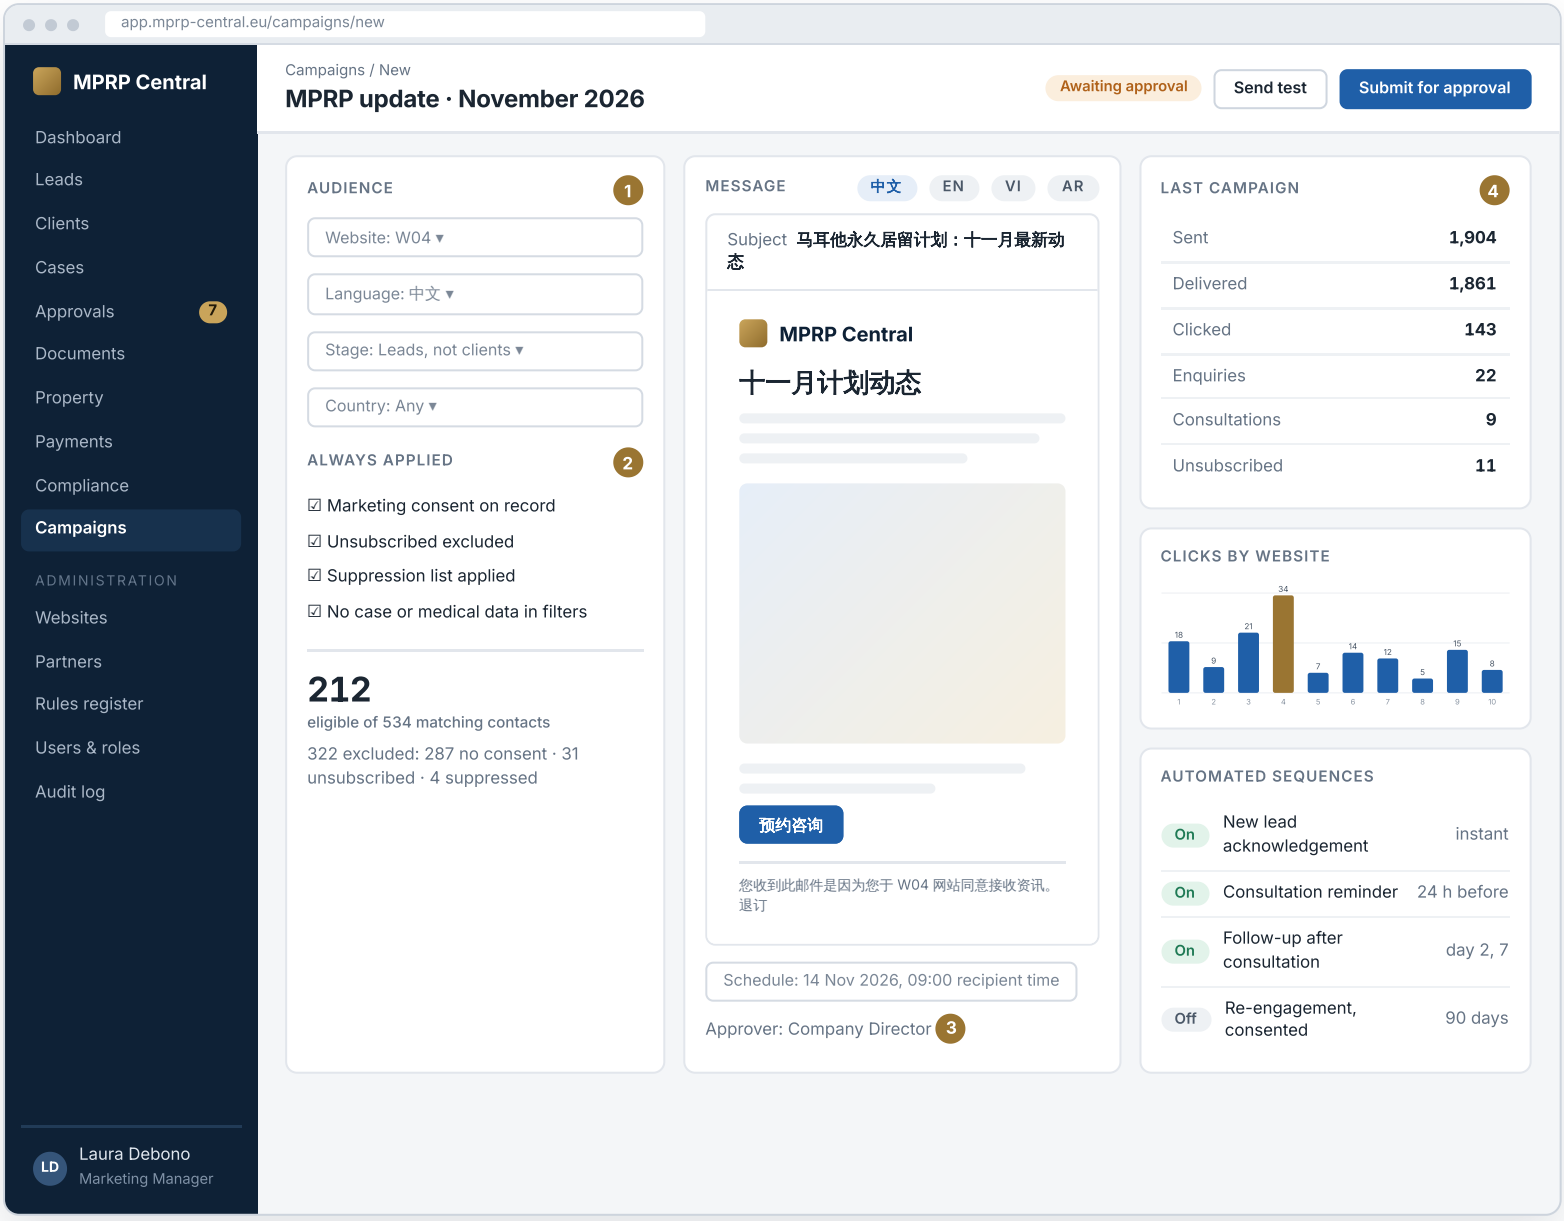

4 Finance confirms
Finance matches the bank confirmation before marking a payment verified.

AMOUNTS ARE NOT HARD-CODED
All statutory figures are read from the rules register, so a legal change needs no software change.

Campaigns

Email marketing built on consent: audiences are filtered automatically and bulk sends need approval.

Marketing

1. **Target by origin**
   Website, language, country and enquiry type, drawn from the lead record.
2. **Consent filters cannot be switched off**
   Contacts without marketing permission, or who unsubscribed, are removed automatically and counted.
3. **Bulk sends need approval**
   A second person signs off before anything is sent.
4. **Results back to revenue**
   Delivery, clicks, enquiries and consultations are tied back to the originating website.

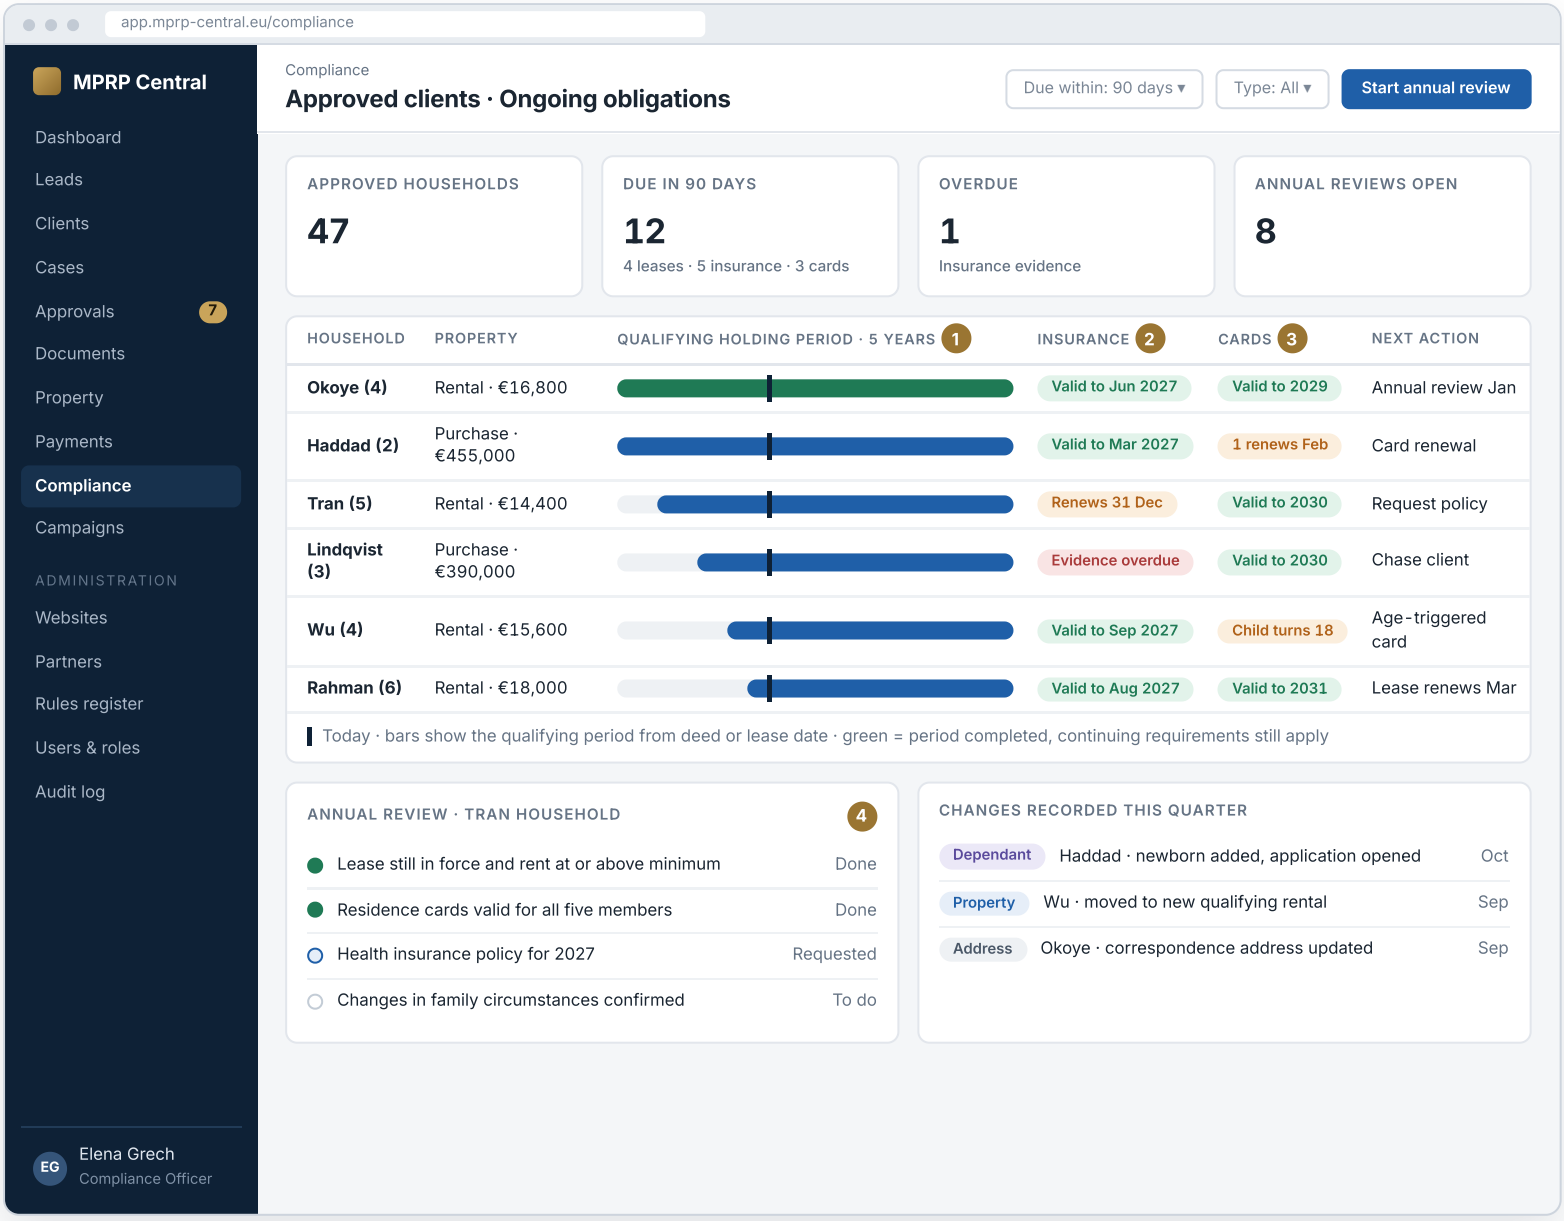

CLIENTS ARE NOT AUTO-SUBSCRIBED

Becoming a client never adds marketing consent. Application data never enters a segment.

Post-approval compliance

The relationship continues after approval: property, insurance and cards are monitored for every household.

Compliance · Relationship managers

1. **Holding period**
   The five-year qualifying property period is tracked per household from the real start date.
2. **Insurance**
   Policy expiry dates drive reminders to the client and tasks for staff.
3. **Residence cards**
   Expiry and age-triggered renewals are tracked per person.
4. **Annual review**
   A yearly compliance check is generated from the client record, with evidence stored.

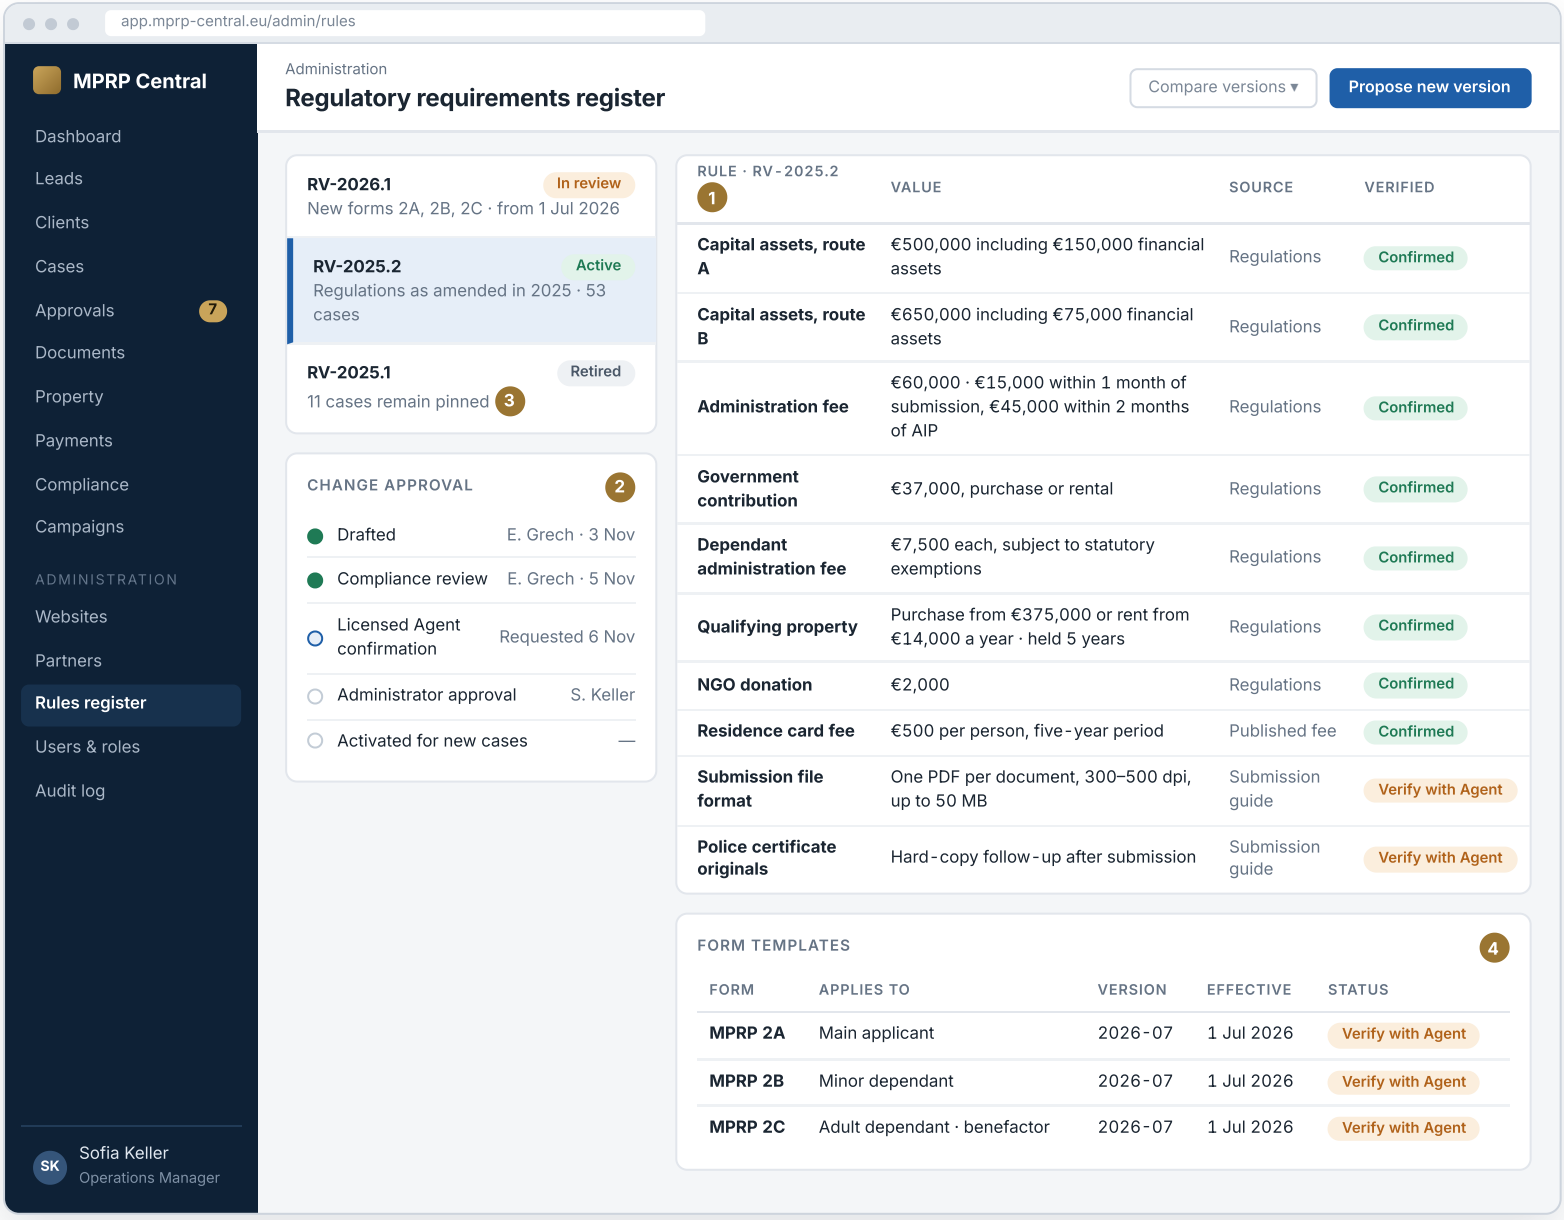

DOES NOT CLOSE AT FIVE YEARS

Continuing requirements remain configurable; obligations do not end automatically.

Rules register

Programme amounts, deadlines and forms live here as approved versions, so legal changes never require reprogramming.

Administrators · Compliance

1 Every value has a source
Each rule records where it comes from and when it was last verified.

2 Changes need approval
A new version is drafted, reviewed, confirmed and approved before it takes effect.

3 Existing cases are protected
A case keeps the version it started under; history is never rewritten.

4 Forms are templates
Fields, conditions, signatures and attached documents are configured per version.

UNVERIFIED ITEMS STAY FLAGGED
Rules taken from circulars or guides remain marked “Verify” until the Licensed Agent confirms them.

Who can see what

Access is decided by role, by assigned case and by type of data, and enforced by the system, not by hiding menu items.

	COMPANY STAFF					EXTERNAL PARTNERS			CLIENT
TYPE OF INFORMATION	SALES	CASE MANAGER	COMPLIANCE	FINANCE	MARKETING	LICENSED AGENT	NOTARY	BANK LIAISON	APPLICANT

Published updates and requests	◐	●	●	◐	○	●	◐	○	●

● Full access within own cases
◐ Limited: only what is granted or published
○ No access

PARTNERS
Always limited to assigned cases. Limited access means specific documents approved for that partner.

CLIENTS
See their own household only, and only items that have been published to them.

DIRECTORS AND AUDITORS
Directors see everything; auditors have read-only access. Every view of a sensitive document is logged.

TESTED, NOT ASSUMED
Automated tests prove that one partner cannot reach another partner's cases by any route.

Delivery phases

Ten phases, each independently testable. The proof column is the test that must pass before the phase is accepted.

	PHASE	WHAT IS DELIVERED	PROOF OF COMPLETION
1	**Foundation**	Sign-in with two-step verification, roles, audit log, core dashboard	A user sees only what their role allows
2	**Lead capture**	Ten-website connection, duplicate handling, pipeline, conversion	A lead from website 4 arrives tagged, assigned and acknowledged
3	**Client onboarding**	Applicant and family profiles, questionnaires, document rules	Spouse and two children produce the correct checklists
4	**Application management**	Case stages, Licensed Agent assignment, references, deadlines	A recorded submission creates the correct fee deadline
5	**Partner collaboration**	Partner and notary portals, approval gate, messaging	A partner request stays hidden until approved
6	**Client portal**	Status, requests, uploads, messages, four languages	Client sees only approved items
7	**Property and finance**	Property cases, bank coordination, invoices, verification	An upload alone never marks a payment verified
8	**Marketing**	Campaigns, segments, consent, performance	Unsubscribed contacts are never selected
9	**Ongoing compliance**	Annual reviews, property, insurance, card renewals	Reminders fire before each expiry
10	**Production readiness**	Security testing, privacy review, backups, launch	Independent security review passed

Needed before build starts

1. **Current forms and instructions**
   From the contracted Licensed Agent, to confirm the 2026 forms and submission rules.
2. **Website access details**
   Platform and form technology for each of the ten sites.
3. **Partner list**
   Which Licensed Agents and notaries are contracted, and what data they are authorised to receive.
4. **Legal and privacy review**
   Sign-off on workflows and a data protection impact assessment before live client data is used.
5. **Brand assets**
   Company name, logo and colours for the client portal.

STATUS OF THIS DOCUMENT

A design blueprint for discussion. No part of the platform has been built yet.
